WE-1550-YZ-CW Series High-power Optical Amplifier (With PON Port)

1 Product Overview

WE-1550-YZ-CW optical amplifier uses well-known high-performance erbium-ytterbium co-doped double-clad fiber and low-noise pump laser. It has a reliable circuit design and efficient heat dissipation design. The maximum total output power of the whole machine can reach +37dBm, and it supports up to 16 outputs, with optional optical switch, CWDM, and RF detection. It provides SNMP protocol network management software and WEB network management, suitable for amplified transmission of downstream 1550nm optical signal in FTTH network.

4 External Function Description

4.1 Front Panel Description

- 1. Power indicator: One switching power supply is working yellow; two switching power supplies are working green.
- 2. Optical input power indicator: This light turns on when the optical input power is > -10dBm.
- 3. Pump working status indicator: Red light means the pump is not working; Flashing red light means the machine has broken down; Green light means the pump is working normal.
- 4. Optical output power indicator: This light turns on when the optical output power is > +10dBm.
- 5. 160×32 dot-matrix LCD screen
- 6. Display the exit or cancel key of the setup menu.
- 7. Display the down or decrease key of the setup menu.
- 8. Display the up or increase key of the setup menu.
- 9. Display the enter key of the setup menu.
- 10. Pump laser switching key: "ON" means the pump laser is open and "OFF" means the pump laser is closed. Ensure the key is on "OFF" position before power on. After passing self-test, rotate the key to "ON" position according to the displayed message.
- 11. PON port
- 12. Public port (COM port)
- 13. Optical signal input

6.Communication Setup Descriptions

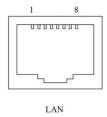

6.1 Communication Interface Description

1) RS232 communication interface adopts DB9 standard connector, the pin definitions as follow: The serial communication uses the standard NRZ form, 1 starts bit, 8 data bits, 1 stop bit and the baud rate is 38400.

1: No Connect	2: TX	3: RX
4: No Connect	5: GND	6: No Connect
7: No Connect	8: No Connect	9: No Connect

2) LAN communication interface adopts RJ45 standard connector, the pin definitions as follow:

1: TX+	2: TX-	3: RX+
4: No Connect	5: No Connect	6: RX-
7: No Connect	8: No Connect	

6.2 WEB Network Management

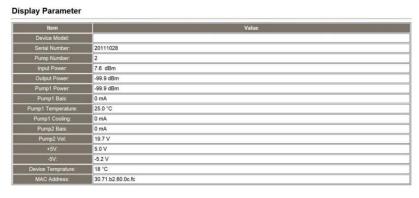

1. Opening the IE browser and entering the equipment IP address leads to the following interface:

2. Enter the user name admin and password 123456 (factory default), to show the following interface:

The **Item** shows the changeable parameters, **Current**—the current parameters; **New**—select or enter the new parameters; **Update**—update the parameters.

The update steps: Find the item which needs to be changed, select a new value, and click the **Update** button.

7 Attention

- Ensure the package is not defaced. If the equipment is damaged due to transportation or other reasons, please don't electrify to avoid worse damage.
- Before powering on, make sure that the grounding terminals of the chassis and power socket are reliably grounded, and the grounding resistance should be $<4\Omega$, which can effectively protect against surges and static electricity.
- Optical amplifier is a highly technical professional equipment, its installation and debugging must be operated by
 professional technicians. Read this manual carefully before operating to avoid damage to equipment caused by fault
 operation or accident harm to the operator.
- When installing and debugging optical equipment, invisible laser beams may be emitted inside the fiber connector. Avoiding
 permanent harm to the body and eye, the fiber connector should not aim at the human body and human should not look
 directly at the fiber connector with the naked eye!
- There must be no shielding outside the ventilation holes of the device. Poor ventilation will cause the index to decrease, and in serious cases will cause damage to the device.
- When cleaning the fiber end face, you must confirm that the optical source is turned off.
- When the fiber connector is not in use, put a dust cover to avoid dust pollution and keep the end surface of the optical fiber clean.
- When installing the fiber connector, apply appropriate force to avoid damage to the adapter. Otherwise, the output optical power may decrease.
